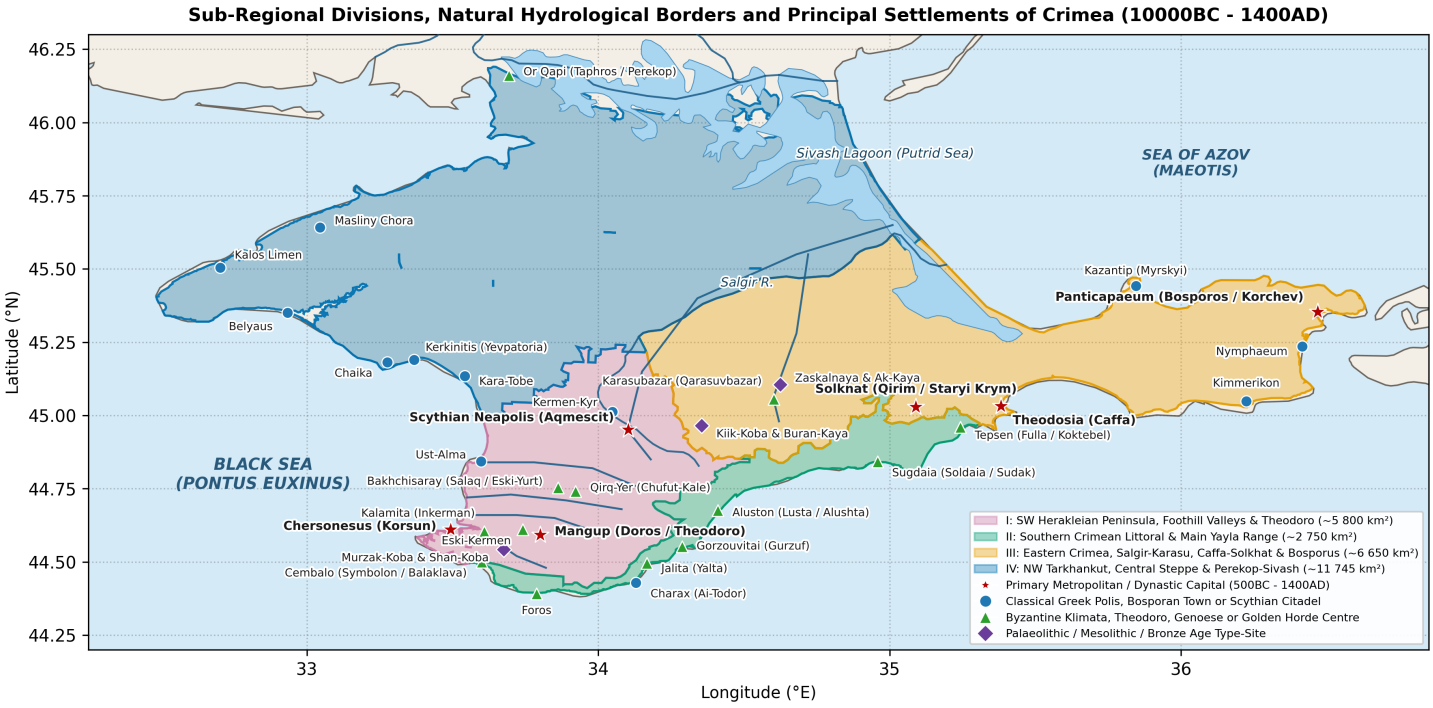

Figure 1. Cartographic basemap of Crimea showing the four natural sub-regions, hydrological network and principal settlements (10000BC - 1400AD).

Gazetteer Methodology and Structure

This settlement gazetteer accompanies the regional demographic literature review of Crimea (`crimea`, ~26 945 km^2) and documents all 171 individual settlements and archaeological sites encoded in `crimea_settlements.json` across the time domain 10000BC to 1400AD. Every entry conforms to the `population_Stadester` JSON schema (`name`, `other_names`, `coords`, `country`: `"Ukraine"`, `key`: `"<Name>-Ukraine"`, and positive integer `population` benchmarks > 0).

Population series are calibrated from rock-shelter and open-camp planimetry for the Palaeolithic, Mesolithic, Neolithic and Bronze Age (`10000BC – 1000BC`) [1][2][3]; walled urban area and rural *chora* cadastres for Classical Chersonesus Taurica, the European Bosporan Kingdom and the Late Scythian Kingdom (`500BC – 400AD`) [4][5][6]; and fortress enclosures, cave-town plateaus and commercial quarter reconstructions for Byzantine Cherson, Crimean Gothia, the Khazar Tudunate, Kievan Rus Korsun and Korchev, the Principality of Theodoro, Golden Horde Solkhat and Genoese Gazaria (`500AD – 1400AD`) [7][8][9][10][11][12][13].
